

# HACKERS

Myth Vs reality

Ian MacAlpine

# Introduction

Hackers have been around since the dawn of the techno age . But are the as bad as they are portrayed?

- are all hackers Bad?
- Go inside the mind of a Hacker to understand their motivations and reasons for doing what they do
- Hear from a real hacker: do they think they are bad people?

Cage: " Its not as simple as all that, not good or evil that's an extreme, Think of I more like I'm taking pennies of the billion."

# Are They Bad?

There are 5 full categories of Hacker but the three we will focus on are white hat, black hat, and grey hat hackers

## White Hat

Ethical  
Works in  
corp. America  
Finds bugs to stop  
Black hats

## Black hat

Malicious  
Uses exploits to  
harm or threaten  
people  
Often uses skills to  
extort people for  
money

## Grey Hat

Not malicious but  
not always ethical  
Often exploiting  
videogames for  
monetary gain  
Has possibly at  
one point broken  
the law while  
hacking

Cage: "I really don't feel like a bad guy I think I fall in the grey hat area, like I've done some Sh\*t, but never actually hurt anybody."

# Basic Wall Hacks

Cage: "I've made tons of different types of wall hacks, every few months one will get so big the companies start to notice and I have to scrap and start again."

# CAGE AKA Grey Hat Hacker

## Affiliations

- Works for a company that creates cheats for videogames by finding and utilizing exploits and writing code to fool those games
- Freelances as a code tester and writer

## Projects

- Wall hacks
- Aim-bots
- Designing a physical robotic arm to control your character with A.I

Cage: " There is a huge science aspect to it all and you can make good money doing this all legally, but sometimes you don't get the opportunity to try the legal way."

# Thank you

---

Ian MacAlpine

ianmacalpine@student.fullsail.edu

Cage: Thank you for actually listening to me, and not twisting my words to villainize me, Sh\*t happens more often then you think
